

# SeeTusk — Home Page Change Specification

Required changes for the Home page (/), drawn from the Website Functionality and Messaging Audit (25 June 2026).

Checked against the current development build at dev.seetusk.com · Prepared 26 June 2026

---

## 1. Purpose

---

This document lists the specific changes to make on the SeeTusk home page. Each item comes from the website audit and has been checked against the current development build, so the status column shows whether the change is still outstanding or already in place on dev. Use it as a build checklist for the home page only — sitewide items are included where they directly affect this page.

### The job of the home page

Give a first-time visitor an immediate, plain-English understanding of what SeeTusk does, who it is for, why it is credible, and which service path to take next — ideally within the first screen.

### How to read the status column

- **To do** — not yet reflected on dev; action required.
- **Partly done** — present but needs tightening or completion.
- **Done on dev** — already implemented; listed so it is not undone in the rebuild.

## 2. Summary of home-page changes

---

| Priority  | Area          | Change                                                                                                                              | Status             |
|-----------|---------------|-------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| <b>P0</b> | Service paths | Give the fourth service (Campaign Launches) a real destination — a dedicated page, or a Contact route with the service preselected. | <b>To do</b>       |
| <b>P1</b> | Case studies  | Make “View case” lead to real case detail (a page or expandable drawer), not the matching service page.                             | <b>To do</b>       |
| <b>P1</b> | CTAs          | Audit every home CTA so each one opens a real, intent-matched destination.                                                          | <b>To do</b>       |
| <b>P1</b> | Service strip | Add a compact “We help with” strip right after the hero: Content · Creators · Web & Tech · Campaign Launches.                       | <b>To do</b>       |
| <b>P1</b> | Hero          | Keep the hero concept; align the plain support line to the agreed sitewide one-liner.                                               | <b>Partly done</b> |
| <b>P1</b> | SEO / domain  | Lock one canonical domain; keep the home title, description and schema consistent with it.                                          | <b>Partly done</b> |

| Priority | Area          | Change                                                                                                 | Status      |
|----------|---------------|--------------------------------------------------------------------------------------------------------|-------------|
| P1       | Accessibility | Reduced-motion support, visible focus, contrast, single-link cards, non-split headings, logo alt text. | To do       |
| P2       | Newsletter    | Keep the newsletter in the footer only, not stacked against the final project CTA.                     | To do       |
| P2       | Page order    | Keep founders below service clarity and proof; trim the block if the page runs long.                   | Partly done |
| P2       | Navigation    | Keep top nav client-focused and identical across pages; confirm where Campaign Launches lives.         | Partly done |
| —        | Careers       | Careers moved out of the top nav into the footer.                                                      | Done on dev |

### 3. Detailed changes

#### 3.1 Hero and positioning

**Current on dev:** *the headline “OWN. BUILD. RENT. DISTRIBUTION FOR AMBITIOUS BRANDS.”, followed by a strong support paragraph and a “Start a project” button.*

- Keep the hero concept. The “Own. Build. Rent.” line is distinctive but hard for a cold visitor to decode on its own, so the plain support line underneath has to carry the actual meaning.
- Tighten the support line to the agreed sitewide one-liner so the home page and every other page say the same thing. The current dev copy is close but not identical — align the wording (see the copy bank in section 4).

**Status:** **Partly done** — a support line already exists; align its wording.

#### 3.2 A compact “We help with” strip and the four service paths

**Current on dev:** *the four services appear as full cards in the “What we do” section, after the client-logo wall and below the fold. There is no compact strip in the first screen.*

- Add a simple “We help with” strip immediately after the hero listing the four paths — Content, Creator Campaigns, Web & Tech, Campaign Launches — so the full offer is visible without scrolling.
- Use one service vocabulary everywhere. The page currently labels them Content / Creators / Web / Campaigns; keep the names consistent with the chosen set (Content and Brand, Creator Campaigns, Web and Tech, Campaign Launches).

**Status:** **To do.**

#### 3.3 The fourth service needs somewhere to go

**Current on dev:** *three service pages exist (Content, Creators, Web & Tech). The fourth card, “Campaigns”, links to the Contact page with no service preselected. There is no Campaign Launches page and no nav entry for it.*

- Choose one route: (A) build a dedicated Campaign Launches page, or (B) keep Campaigns as a CTA into Contact with the service preselected (a hidden or prefilled value) so the brief arrives already tagged.
- Whichever is chosen, the home page's four-service promise must match what a visitor can actually reach. Today the page promises four things and only three have a home.

**Status: To do.**

### 3.4 Case studies and proof

**Current on dev:** *four case cards (Ambar Coffee, FIRVT, DevKnight, Fevistik) each end in “View case”, but the links go to the matching service page (/content, /influencer, /web), not to a case study.*

- Turn case cards into real proof: dedicated case pages or expandable drawers, each with problem, work, result, timeline and deliverables.
- Until real cases exist, relabel the CTA (e.g. “See the service”) or hold the “View case” wording so it does not promise a page that is not there. The audit's SEO note is explicit: remove or redirect “View case” links if cases are not public yet.

**Status: To do.**

### 3.5 Page length and section order

**Current on dev:** *a long single-scroll page — hero, logos, what we do, results, case studies, industries, why us, engagement models, founders, testimonials, FAQ, final CTA, newsletter, footer. Founders sit below the differentiator and engagement models.*

- Keep service clarity and proof above team detail — already the case on dev. Clients need to understand the offer and see proof before meeting the team.
- The page is strong but long; consider trimming the founder block (or moving that detail to About) so the run from proof to services to CTA stays tight. Lower priority.

**Status: Partly done — order is already correct; trimming is optional.**

### 3.6 Navigation and footer

**Current on dev:** *top nav = Content · Creators · Web & Tech · About. Careers sits in the footer (Studio group), not the top nav. The footer is clean, with no broken legacy links visible.*

- Careers in the footer rather than the top nav is already done on dev — keep it this way.
- Keep the top nav identical on every page.
- Resolve the Campaign Launches gap (see 3.3): either give it a nav slot or accept it as a CTA-only path, but make the choice deliberate.
- Note: the audit's suggested nav is Services · Work · About · Contact. The dev site instead leads with the three verticals. Either model works, but if case studies become real (3.4) a “Work” destination should be reachable, and a Contact entry beyond the hero CTA is worth considering.

**Status: Partly done — Careers placement done; nav model and Campaigns slot to confirm.**

### 3.7 CTA audit

Every home CTA should open a real, intent-matched destination. Observed on dev:

| CTA (and location)                | Current target on dev                      | Action needed                                                                                       |
|-----------------------------------|--------------------------------------------|-----------------------------------------------------------------------------------------------------|
| Start a project (hero)            | /contact.html                              | Keep. If service routing is used, pass the relevant value.                                          |
| See content work (Content card)   | /content.html                              | Keep.                                                                                               |
| See creator work (Creators card)  | /influencer.html                           | Keep.                                                                                               |
| See web & tech (Web card)         | /web.html                                  | Keep.                                                                                               |
| Start a campaign (Campaigns card) | /contact.html — no service preselected     | Preselect the Campaign Launches service on Contact, or point to a Campaign Launches page (see 3.3). |
| View case ×4 (Case studies)       | Service pages: /content, /influencer, /web | Point to real case detail, or relabel until cases exist (see 3.4).                                  |
| See the work (final CTA)          | #featured-work anchor                      | Verify the anchor resolves and scrolls to the case studies section.                                 |
| Subscribe (newsletter)            | Newsletter form                            | Confirm the form is connected and shows success and error states.                                   |

### 3.8 Newsletter placement

**Current on dev:** *the “Read what we ship” newsletter block sits in the final “Next move” section, directly after the “Start a project / See the work” CTAs and just above the footer.*

- Keep the newsletter in the footer only, so it does not compete with the primary project CTA. Confirm it shows confirmation and error states.

**Status:** **To do.**

### 3.9 SEO and metadata (home)

**Current on dev:** *the title (“SeeTusk Creative Agency — Content, Creator Campaigns & Web (Pune, India)”) and the meta description match the one-liner — both good and on message. Canonical and og:url point to https://seetusk.agency/.*

- Lock one canonical domain. The build is served at dev.seetusk.com, the audit reviewed seetusk.com, and the canonical and og tags say seetusk.agency. Pick the final production domain and make canonical, og:url, the sitemap and internal links all use it, with 301s from the rest.
- Keep the home title and meta description aligned to the chosen service architecture — already in good shape, just keep it consistent.
- Add organization and service schema with correct contact details, address and social links. Not visible in the current markup.

**Status:** **Partly done** — title and description good; domain and schema to finalize.

### 3.10 Accessibility and interaction (home)

The brand is motion-heavy, so these matter most on the home page.

- Respect reduced motion: honour prefers-reduced-motion for the hero, the marquee logo wall and any scroll or ticker animation.
- Visible keyboard focus on nav links, the service and case cards, the FAQ accordions and every CTA.
- Make each card a single link: the service and case cards should behave as one link with a clear accessible name, not a block of separate clickable fragments.
- Avoid headings split letter-by-letter in the DOM (the stacked “Seetusk / Creative / Agency” wordmark and the hero): make sure the accessible heading reads as whole words for screen readers and crawlers.
- Contrast: check grey-on-dark body text, the small uppercase section labels (001, 002...), the maroon/gold accents and the ticker line against the dark background.
- Alt text: the client-logo wall is rendered twice; the second (marquee) copy has empty alt — keep that decorative or aria-hidden, and keep descriptive alt on the first set. Team photos and case visuals need useful alt text.

**Status:** **To do.**

## 4. Copy replacement bank (home)

---

Suggested copy from the audit for the home page. Use the same wording on the rest of the site so the message stays identical.

| Element                                   | Suggested copy                                                                                                                                                          |
|-------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Hero support line</b>                  | We help growing Indian brands get seen and chosen through content, creator campaigns, and websites that convert.                                                        |
| <b>Service intro</b>                      | Pick the part of the growth loop you need fixed: your content, your creator distribution, your website, or a launch that needs to travel.                               |
| <b>Case study CTA</b>                     | See exactly what we shipped, what changed, and what we would do differently next time.                                                                                  |
| <b>Sitewide one-liner (for alignment)</b> | SeeTusk helps growing Indian brands get seen and chosen through content, creator campaigns, and websites that convert.                                                  |
| <b>Footer description</b>                 | SeeTusk Creative Agency is a Pune-based creative distribution studio. We build content, creator campaigns, web surfaces and launch systems for ambitious Indian brands. |
| <b>Service card — Content and Brand</b>   | We own your voice, content calendar, shoots, reels, statics and reporting so your brand shows up clearly every week.                                                    |
| <b>Service card — Creator Campaigns</b>   | We source, brief, contract, track and report creators so you know which posts drove reach, clicks, orders and reusable assets.                                          |
| <b>Service card — Web and Tech</b>        | We write, design and build websites, landers, Shopify surfaces and lightweight tools that turn attention into leads or sales.                                           |

| Element                                 | Suggested copy                                                                                                |
|-----------------------------------------|---------------------------------------------------------------------------------------------------------------|
| <b>Service card — Campaign Launches</b> | We shape the idea, visual world, shoot, creator layer and rollout plan for launches that need to travel fast. |

## 5. Home-page QA checklist

---

The home-relevant items from the audit's launch checklist:

- Home hero states the offer in plain English within the first screen.
- The four service paths are all visible and all reachable (Campaign Launches included).
- Top navigation is client-focused and identical on every page.
- Footer is consistent and has no broken or legacy links.
- Every CTA has a real destination that matches visitor intent.
- “View case” opens real proof, not a service page or a dead link.
- “See the work” anchor scrolls to the case studies section.
- Newsletter signup is connected, shows confirmation and error states, and lives in the footer.
- Cards are single links with clear accessible names, and keyboard focus is visible.
- Motion respects reduced-motion settings.
- Client logos, team photos and case visuals have useful alt text (duplicate marquee logos are decorative).
- Home meta title and description match the chosen service architecture and canonical domain.
- Analytics events fire for service CTAs, the project CTA, case clicks and newsletter signup.
